

Define your problem statement

Handwriting recognition system has the capability to identify and understand handwritten digits or characters automatically. The complexity in this project is to identify the handwritten of different styles. Web application is coesteid was er ean upload an image of a handwritten digit, this image is analyzed by the model and the detected result is returned on to UI.

> **PROBLEM** To identify the handwritting of different styles of different persons.

- Brainstorm A model is created using artificial neural network and trained with different
- datasets and making the model to get bigher accept to recognize the digits
